Claim Amendments
Including a complete listing of all claims

Claims 1-33 (Canceled)

34. (Original) A pre-dosed dental desensitizing system comprising:

a sealed package having a first chamber and a second chamber;

a first applicator having a first applicator portion pre-dosed with a first dry inactive material placed within the first chamber of said sealed package; and

a second applicator having a second applicator portion pre-dosed with a second dry inactive material placed within the second chamber of said sealed package,

wherein the first dry inactive material and the second dry inactive material when re-activated and combined form a dental desensitizer.

Claims 35-36 (Canceled)

37. (Previously Presented) A pre-dosed dental desensitizing system comprising:

a sealed package having a chamber; and

an applicator having an applicator end portion pre-dosed with a dry inactive desensitizing material, said applicator

placed within the chamber of said sealed package,

whereby the dry inactive desensitizing material can be re-activated and applied to a sensitive tooth.

38. (Previously Presented) A pre-dosed dental desensitizing system comprising:

a sealed package having a chamber;

an elongated handle having a reduced diameter neck and a tapered end, said elongated handle placed within the chamber, whereby the reduced diameter neck may be bent to form a desired angle relative to said elongated handle;

an applicator end portion placed on the tapered end of said elongated handle; and

a desensitizing agent dried on said applicator end portion, whereby said desensitizing agent dried on said applicator end portion is capable of being re-activated and applied to a sensitive tooth.

39. (New) A pre-dosed dental material delivery system comprising:

a sealed package having a first chamber and a second chamber;

a first applicator having a first handle and a first applicator portion placed within the first chamber;

10/529,619

P-2442/CIP

a first flock material placed on the first applicator portion;

a first dry inactive material placed in said first flock material;

a second applicator having a first handle and a second applicator portion place within the second chamber;

a second flock material placed on the second applicator portion;

a second dry inactive material placed in said second flock material; and

wherein said first dry inactive material and said second dry inactive material when re-activated and combined form an active dental material used in performing a dental procedure.

40. (New) A pre-dosed dental material delivery system as in claim 39 wherein:

the active dental material comprises a dental desensitizer.
